

Cercle Clichy-Montmartre bet big with IndigoVision.

Overview

Vertical Market:

Casinos

Reference Site:

Cercle Clichy-Montmartre,
Paris, France

Partner:

75 Ohms, France

End User:

Cercle Clichy-Montmartre

Technology Features:

Distributed Network Architecture, ACF+, Analytics, AAC Audio, NVR AS-3000, NVR AS-4000, Ultra 1K and 2K Cameras, BX400 5MP Minidome, 9000 Encoders

Background

The Cercle Clichy-Montmartre in Paris, famous for its "Roulette of the People", was faced with new regulations.

These required every table to not only have video surveillance, but audio recordings too. And both recordings had to be backed up with a minimum of 28 days retention.

Solution

Cercle Clichy-Montmartre had the foresight to see the benefits of a complete IP video solution early on, they had partnered with IndigoVision. IndigoVision's backward compatibility meant the casino was able to continuously add new products, bring existing analogue cameras to IP and complement existing equipment. Compatibility brought with it not just increased security but considerable storage and financial savings.

Compliance was achieved through IndigoVision NVRs, over 65 IndigoVision HD cameras. Twenty-five IndigoVision encoders brought existing analogue cameras to IP. With NVR-AS 3000s and NVR-AS 4000s storage retention was easily achieved.

IndigoVision's Security Management System, Control Center, coupled with the high definition image quality from new HD cameras meant access to recorded footage at all tables was easy. Synchronised AAC audio and video was achieved on poker tables with IndigoVision's Ultra 1K and 2K Cameras with built-in SMART.core technology. IndigoVision's ACF+ (Activity Controlled Framerate) reduce storage costs when tables are not open without jeopardising reliability.

Several in-house disputes were resolved immediately, having improved situational awareness meant seeing and hearing everything was now easy.

New IndigoVision products are scheduled to be installed in early 2017.

There may be no end to the challenges to gaming security, but with IndigoVision there is no end of solutions to keep you and your business safe---and future-proof.

Benefits

IndigoVision's unique Distributed Network Architecture increases reliability and resilience with no single point of failure.

IndigoVision's ACF & ACF+, bandwidth management reducing storage costs.

Analytics algorithms bring significant benefits in both live-monitored and incident review operations

SMART.core™ Technology means that there is reduced latency when tracking objects.

An audio compression and encoding format. It delivers higher quality audio than traditional G.711 format.

M LUC RICHARD
MANAGING DIRECTOR OF
CERCLE CLICHY-MONTMARTRE

"IndigoVision's solution provides 100% reliability, perfect audio sync, is easy to use and the ACF helps save on storage costs when tables aren't open."
